IT Infrastructure Solutions

Your IT infrastructure delivers the workloads that enable your organisation to operate. Evaris designs, deploys and maintains IT infrastructure solutions for a wide range of organisations.

Technology has an increasingly pivotal role in enabling business advantage. Whether you're planning a simple hardware upgrade, a complete data centre refresh or anything in between, our mission is to provide you with the technology platform you need for business success. As an independent, vendor agnostic company we can take a holistic, impartial and user experience led approach. We focus on identifying the right technology solutions and tailoring them to the needs of your organisation.

Our team of consultants has extensive experience and expertise relating to all the IT building blocks across the technology stack including servers, storage and networking. Whether you're running a traditional, converged or hyperconverged infrastructure, on-premise or in the cloud, we'll ensure you have a rock-solid IT foundation so you can focus on running your business.

IT Modernisation

The exponential rate at which technology is evolving in today's digital world presents both challenges and opportunities for organisations. Businesses that modernise their technology infrastructure can streamline operations, achieve compliance and reduce costs. They can also unlock powerful benefits such as increased agility, speed, scalability and automation. Wherever you happen to be on your IT transformation journey, Evaris can help you leverage technology to improve your bottom line and maintain a competitive edge.

We've got your infrastructure covered

Our substantial stockholding of both current and legacy IT hardware equipment allows us to offer rapid infrastructure fulfilment and deployment across the UK and overseas.

Servers - Intelligent, scalable and secure server solutions that cater to a broad spectrum of traditional and emerging workloads.

Backup & disaster recovery - Secure and resilient backup, restore and business continuity solutions to safeguard your data and keep you online.

Storage - Data storage solutions to store and protect your data with simplicity, performance and efficiency built in as standard.

Power, cooling & racking - UPS, cooling and rackmount equipment to house and protect your infrastructure and maximise uptime.

Networking - Wired and managed wireless connectivity solutions to transform your operations in the data centre, on campus and in branch offices.

Security & load balancing - Firewalls and load balancers to ensure secure, high availability for your most demanding workloads.

Hyperconverged - Virtualised server, storage and network resources combined with intelligent software for an agile, scalable data centre.

Infrastructure as a Service (IaaS) - Run or distribute your platform or infrastructure securely and compliantly – directly from the cloud.

10+ years working with multinational business clients

Infrastructure services

We have the vendor relationships, stockholding and in-house expertise to assist with all stages of the IT lifecycle, from pre-sales scoping and selection to purchasing, fulfilment and post-sale servicing.

Solution consultancy - From strategy, planning and assessing your technological readiness through to fully managed design and implementation, we take a customer-focused approach to ensure we deliver a solution that's on time, on budget and tailored to the needs of your organisation.

Design and architect - We capture and translate your business objectives to technical requirements and create a bespoke configuration blueprint. A deployment plan is defined specifying project success criteria. If relevant, a proof of concept is created.

Configuration, install and deployment - Trust our team to lead deployments from planning and basic hardware installations to configuration and complex integrations. Our nationwide team of multi-disciplined engineers are trained and certified by all of the leading IT hardware vendors.

Warranty support & maintenance - On-site and remote response, fix and advanced replacement cover with multi-vendor, around the clock expertise, guaranteed SLAs and worldwide coverage options.

INFRASTRUCTURE SOLUTIONS

- Hardware refreshes
- Site installations
- Hybrid cloud
- Data protection
- Hyperconverged/converged
- Power, cooling & management
- Virtualisation & consolidation
- Data warehousing
- Co-location solutions

Performance assessments & monitoring - We provide a range of sophisticated network monitoring and management services that give us visibility and control of your infrastructure devices including routers, switches and firewalls. Our tools enable us to proactively identify performance issues, keep business critical hardware online and free you from the network admin overhead so you can focus on more strategic initiatives.

System health checks - We monitor a variety of key system parameters to ensure your infrastructure runs smoothly and identify potential issues before they arise. Our health checks can be run on demand or as an ongoing service with the ability to set trigger based alerts to investigate performance spikes and unusual activity patterns.

Data centre migrations & cloud deployments - Migrating apps and infrastructure to the cloud can allow organisations to shift their focus from routine IT management to more strategic areas such as business innovation. For all its benefits, not everything belongs in the cloud and many forward-thinking organisations choose a hybrid mix of services with a blend of cloud and traditional on-premises infrastructure. This hybrid approach can provide the best of both worlds with more flexibility to segment and scale your workloads as well as improved cost and management controls. Evaris can help you design and deliver a hybrid architecture that connects your cloud platforms to your traditional servers to meet your unique business requirements.

Infrastructure procurement - Technology sourcing is often a demanding process - it takes time, expertise and the right relationships to ensure the solutions you end up with fit in with your existing systems and support your business objectives. Outsourcing procurement to Evaris alleviates these burdens, reduces the risks of expensive errors or overspending and frees you to focus on running your business.

Education and training - Evaris provides training programs and instructor led courses covering infrastructure solutions from the leading vendors. Arm your staff with the knowledge they need to get the most out of your infrastructure investment. Our courses are taught by instructors who are experienced technical consultants and hold industry recognised training certifications.

Why Partner with Evaris?

We deliver tangible business advantage through the infrastructure solutions we deploy and go beyond standard service provision. Our technical consultants have the expertise required to steer you through the myriad of technology options available, freeing you to focus on driving your business forward.

A partner you can trust

You can depend on Evaris to deliver on our promises, every step of the way. From first contact through service delivery, implementation and ongoing support, we're committed to building lasting relationships that make a positive difference to our customers and their organisations.

Integrity

We uphold the highest standards of integrity in all of our actions.

Accountability

We take our commitments seriously and remain personally accountable for delivering on our promises.

Quality

We strive for excellence in the products and services we provide to deliver premium value to our customers.

There are plenty more tangible reasons why Evaris should be your supplier of choice for IT infrastructure:

Cost management - We help you acquire the technology you need more affordably and with less risk, protecting both your CAPEX and OPEX budgets.

Complementary IT services - A broad range of managed IT solutions and support services to maximise the value of your technology investment.

Guaranteed fix SLAs - Eliminate the need for on-premises expertise with our on-site or remote response fix and advanced replacement warranty services backed by guaranteed service level agreements.

Superior service - A variety of value-added services such as free support, complementary hardware configurations, advance replacements and flexible payment terms tailored to your unique business needs.

Solution expertise - Deep knowledge of advanced technology solutions including storage and back up technologies such as HP 3PAR, XP, StoreOnce, Nimble and SimpliVity.

Knowledgeable, experienced team - We live and breathe technology. Our team have over 30 years experience and have accrued fantastic feedback for their knowledge and service levels.

Accredited with leading technology vendors - Evaris hold accreditations and strategic partnerships with the leading hardware and software vendors.

Fast response times - Internal IT resource you can rely on for help, advice and technical support with fast response times backed by guaranteed SLAs.

Short lead times - A substantial physical inventory ready for immediate shipping worldwide.

Trustpilot

The worlds most powerful review platform

Excellent customer service

Excellent customer service - always manage to solve any problems that there might be on the computer system. Geniuses!

A Dawson
IT Support customer

Friendly advice

Friendly advice. Good prompt communication. Fixed the problem. Didn't make me feel stupid as I am not very knowledgeable about computers - that's why I need them!

P Han
IT Support customer

Superb service

Great people and service during and after sale

O Delaunoy
Web shop customer

Expert knowledge

Evaris provides us with expert knowledge and service making us feel that our IT systems and software are in safe hands.

S Kendell
Managed Services customer

Impressive response times and attitude

We've worked with Evaris for many years now and have always been impressed with their knowledge, response times and attitude. We've had various solutions delivered by Evaris - some more complex than others but they've always been on hand when needed.

A Ahmed
Cloud solutions customer

Professional team

Your professionalism means I can ask any question, no matter how small, without you making me feel stupid, which is extremely important to me personally. I know I can rely on you to help with any problem. Thank you.

P Hancock
IT Support customer

Highly recommended

Price and quality are of extreme importance and, after reading positive reviews about Evaris online, we were directed to their website. We received a great level of help and guidance from their staff and would definitely buy from them again. We would certainly recommend buying from them to others.

G Caitlin
IT Infrastructure customer
